

DD1570-17-S02

- Dry Logs, 7-9 (estimated) commercial logging trailer loads in 15-25 foot lengths

This lot is composed of approximately 7- 9 commercial logging trailer loads of dry logs, cut to approximate lengths of 15-25 ft., in two piles adjacent to each other. The logs have diameters estimated to range from six to twenty-four inches. An estimated one quarter to one third of these logs are considered to be partially rotten. The logs are a mix of conifer and cottonwood.

Most of these logs were removed from Yellowstone National Park in 2016 as part of a fuels reduction program. There are no limbs or small pieces at the site. The lot site is located on U.S. Forest Service property adjacent to the Smokejumper Base at the West Yellowstone, Montana airport. Directions: Travel north from West Yellowstone on U.S. Highway 191 to mile 3.4, turn left and then bear left on Forest Road 6779, and travel 0.6 miles to the wood piles adjacent to the airport fence.

The successful bidder is responsible for the loading and removal of the entire lot. All material in the sale lot, whether sound or rotten, must be completely removed from the site. Loading by grapple hook is strongly recommended due to weight of the logs and the height of the larger pile. Chain saw use may be authorized with all waste and pieces to be removed during the performance period.

All inquiries regarding this lot description and its removal should be directed to Richard Moore, Yellowstone National Park, at 307-344-2103.
